

*No noise
No vibration*

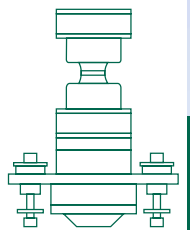

Electric boat drive

▶ **A strong team: the electric boat drive designed by Einmeier and aquadrive antivibration system**

The unique combination of a silent electric motor with the well-known high-quality aquadrive antivibration system creates the necessary conditions for a smooth running, quiet boat.

- ▶ For motor boats and sailing yachts of 5-15 m length
- ▶ For motors of 4-20 kW
- ▶ For refurbishment or conversion of Diesel- to electric drive
- ▶ Permanently on stock in Chieming warehouse
- ▶ Test drive by appointment on the Chiemsee in Germany

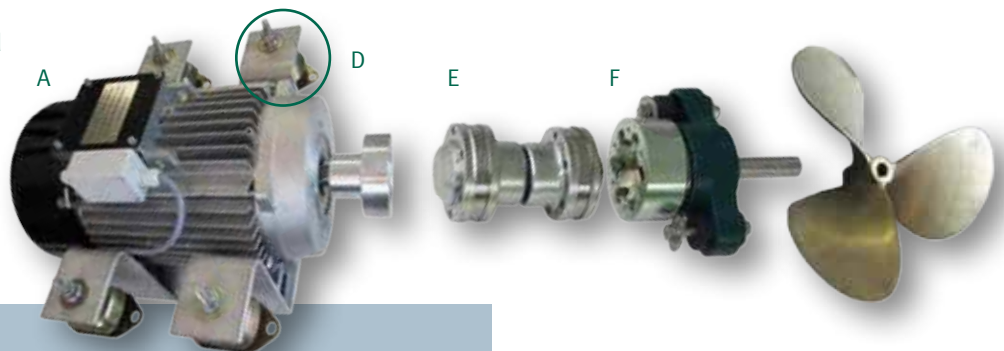

B

C

G

► Delivery includes:

- A. Powerful, wear-free Einmeier electric boat engine (48 Volt three-phase)
- B. Electric control unit
- C. Speed selector lever
- D. Soft engine mounts help reduce the transmission of the engine vibrations to the hull.
- E. The aquadrive constant velocity (CV) driveshaft ensures smooth and vibration-free torque and speed transmission in every direction. The CV shaft automatically adjusts to changes in the alignment between engine and thrust bearing.
- F. Aquadrive thrust bearing assemblies attach to a cross brace in the hull. They transfer the thrust directly to the hull and therefore protect both engine and gearbox mounts.
- G. Multifunction display showing the engine parameters, e.g. shaft speed, energy consumption, engine temperature

► A driveline system for maximum comfort

Just relax and enjoy boating!

- ▶ Extremely quiet
- ▶ Vibration free
- ▶ No odors from Diesel exhaust gases

Forward-looking in environmental protection

- ▶ No water pollution
- ▶ No exhaust
- ▶ Battery charging during sailing possible

Comfortable in use

- ▶ Maintenance-free system
- ▶ Good acceleration with immediate performance
- ▶ Convenient and cost-effective charging at conventional 220/240 Volt socket
- ▶ Range up to 200 km
